FINM 33165 Final Project

Due Thursday, Dec. 12

For this project use fastai and Colab.

The file df_work.csv contains a number of 10-K forms (actually only a portion of managements comments). The purpose of the project is to investigate whether the texts can be used to predict the performance of the company's stock 1 day, 1 week and 2 weeks after the release of the 10K form.

Follow the Colab notebook from Lecture 7 to use the pretrained model and finetune it to the texts in the 10-K forms in the DataFrame.

Submit screen shots of your notebook, in particular the cells where the model is being trained.
